Noida, Uttar Pradesh — Open to Remote & Relocation

Summary

Data & Analytics Engineer with hands-on experience in data analysis, ETL pipelines, predictive modeling, and BI dashboards. Proficient in Python, SQL, Power BI, Excel, and machine learning, with experience transforming raw datasets into actionable insights.

Education

Ajay Kumar Garg Engineering College – Ghaziabad, UP Sep. 2023 – May 2027
B.Tech in Electronics and Communication Engineering **CGPA: 7.5/10**
• Relevant Coursework: Data Structures, Probability & Statistics, Digital Signal Processing, Machine Learning

Experience

Axlero Solutions – Data Analyst Intern Jul. 2026 – Present
• Analyzed and interpreted real-world datasets to identify patterns, trends, and insights supporting business analysis and operational decision-making.
• Developed analytical reports, dashboards, and data visualizations to communicate business performance and insights effectively.
• Performed data validation, quality checks, and preprocessing to maintain accuracy, consistency, and integrity of analytical datasets.

Dhee Coding Lab – Incubation Intern Aug. 2026 – Present
• Undergoing hands-on training in Python, SQL, data structures, and programming fundamentals through the Incubation Internship Program.
• Applying Python and SQL through practical assignments, problem-solving, database concepts, and project-based development.
• Gaining exposure to APIs, Generative AI, and modern technologies through structured training and live project development.

Projects

UDAAN – AI-Powered Student Performance Analytics Dashboard — Python, SQL, Power BI, Excel April 2026
• Built an academic analytics dashboard analyzing 500+ student records using Python, SQL, Power BI, and Excel to monitor academic performance.
• Cleaned and transformed data using Pandas, resolving 15%+ inconsistencies, and designed 4 Power BI dashboards tracking 8 KPIs including GPA, attendance, and backlog trends.
• Developed a Logistic Regression model achieving 78% accuracy to identify students at risk using academic and attendance indicators.

Retail Intelligence & Sales Forecasting Platform — Python, SQL, Flask, Power BI, ML May 2026
• Built a retail analytics platform processing 7,650 transactions to analyze sales performance, customer behavior, and business trends.
• Developed an automated Python ETL pipeline using Pandas, reducing data errors by ~18%, and applied RFM segmentation for customer analysis.
• Applied Ridge Regression for sales forecasting and built a Flask dashboard with 6 KPI modules and Excel/CSV export for Power BI reporting.

Global Data Job Market Analyzer — Python, SQL, Flask, SQLite, ETL June 2026
• Built a job market analytics platform analyzing 5,000+ job listings to identify trends in salaries, skills, roles, and market demand.
• Developed automated ETL pipelines using Python, Pandas, and NumPy and designed a normalized SQLite database with 20+ optimized SQL queries, reducing query time by ~40%.
• Developed a Career Pathfinder recommending the top 5 skill gaps based on market demand and built a Flask dashboard with analytics and REST APIs.

Technical Skills

Languages: Python, SQL, JavaScript, HTML/CSS

Data & Analytics: Pandas, NumPy, Scikit-learn, Power BI, Tableau, Microsoft Excel

ML & Methods: Logistic Regression, Ridge Regression, RFM Segmentation, EDA, Feature Engineering, Predictive Analytics

Frameworks & Tools: Flask, Jupyter Notebook, MySQL, SQLite, GitHub, VS Code, BeautifulSoup, Chart.js

Certifications

AI-Driven Data Analytics – Certified Completed training in data analysis, visualization, Python, SQL, and AI-powered analytical techniques.

Leadership & Extracurricular

2nd Place – Engineering Project Competition [AKGEC] Secured 2nd place in a college-level engineering project competition, demonstrating technical proficiency, problem-solving, and teamwork.
